February 12, 2017

Dear Sir of Madam

<div align="center">2017 Graduate GPU Compute/Compiler Software Engineer</div>

As you will see from my enclosed CV, I am due to graduate from the University of Bath this summer with an honours degree in Computer Science. During my last semester I took a course in advanced compilers which allowed me implement my own compiler for a subset of C to MIPS assembler, I enjoyed the challenges involved and understanding how to overcome them. This has led me to search for a role which will allow me to apply and build on these skills. hence my application to Imagination Technologies.

My course has offered me the opportunity to take a 12 month work placement which I chose to do with a Bath based company specialising in web based tools for health care. My role was as a PHP engineer as part of one of their scrum teams. This provided me with experience of working on a variety of projects and tasks in a team environment. I also regularly participated in, and occasionally led, meetings with other development teams and customers.

I would be pleased to supply further information, and I look forward to hearing from you.

Sincerely yours,

Robert Willison
